

Municipal Unified Communication Platform (PCUM)

What if digital transformation began with communication?

1. Introduction

The Municipal Unified Communication Platform (PCUM) is a centralized digital communication infrastructure designed to modernize municipal operations and improve communication between municipalities, citizens, departments, and partners.

The platform transforms municipalities into connected, agile, transparent, and accessible organizations through modern digital technologies.

2. Vision

To transform Ivorian municipalities into smart, connected, and high-performing organizations through unified communication accessible from anywhere.

3. Objectives

General Objective

To modernize municipal communication systems in order to improve administrative efficiency and enhance the quality of services provided to citizens.

Specific Objectives

- Centralize all municipal communications
 - Improve internal collaboration between departments
 - Strengthen relationships with citizens
 - Support mobility and remote work
 - Reduce communication and operational costs
 - Improve responsiveness and service delivery
-

4. Main Platform Components

A. Citizen Contact Center (CCC)

A.1 Context and Rationale

Municipalities face several communication and service challenges, including:

- Difficulty for citizens in contacting municipal services
- Delays in processing complaints and requests
- Lack of request tracking and transparency
- Limited data for strategic decision-making
- Weak citizen engagement

The Citizen Contact Center (CCC) aims to create a direct digital bridge between municipalities and citizens using modern communication technologies.

A.2 Vision

To build connected, transparent, and citizen-focused municipalities through accessible digital communication systems.

A.3 Project Objectives

General Objective

To improve municipal service quality and strengthen citizen relationships through a centralized digital communication platform.

Specific Objectives

- Facilitate citizen access to municipal services
 - Centralize complaints, requests, and suggestions
 - Reduce response and processing times
 - Improve transparency and accountability
 - Generate analytical data for decision-making
 - Encourage citizen participation in local governance
-

A.4 Communication Channels

Citizens can contact the municipality through multiple channels:

- Call Center (Single Municipal Number)
 - WhatsApp & Instant Messaging
 - Email
 - Citizen Web Portal
 - Mobile Application (Optional)
 - SMS Services
-

A.5 Types of Requests Managed

The platform will handle:

- Complaints (roads, lighting, sanitation, security)
 - Administrative requests
 - Urban incident reporting
 - Municipal information inquiries
 - Suggestions and citizen participation
-

A.6 Workflow Process

1. Citizen submits a request
 2. Request is recorded in the system
 3. Request is automatically assigned to the responsible department
 4. Citizen receives a tracking number
 5. Department processes the request
 6. Citizen receives updates and final resolution
-

A.7 Technological Components

The platform includes:

- IP Telephony & Intelligent Call Center
 - Citizen CRM System
 - Analytical Dashboards
 - Artificial Intelligence for automated responses and request routing
 - Interaction archiving and traceability tools
-

5. Benefits for Municipalities

Governance & Performance

- Better organization of services
- Request tracking and monitoring
- Performance measurement indicators
- Improved transparency

Resource Optimization

- Reduced physical visits
- Faster processing times
- Better prioritization of urgent cases

Data-Driven Management

- Mapping of urban issues
 - Strategic planning based on real citizen needs
 - Decision-support analytics
-

6. Benefits for Citizens

- Faster and easier access to municipal services
- Transparent request tracking
- Reduced travel and costs

- Increased participation in local governance
 - Improved trust in municipal administration
-

7. Expected Impact

The implementation of PCUM is expected to:

- Improve public service quality
 - Strengthen trust between citizens and municipalities
 - Modernize municipal administration
 - Accelerate local digital transformation
 - Promote participatory governance
-

8. Implementation Phases

Phase 1: Assessment & Design

- Municipal needs analysis
- Process definition
- Technology selection

Phase 2: Pilot Deployment

- Platform installation
- Staff training
- Initial launch in selected municipalities

Phase 3: Expansion & Optimization

- Full deployment
 - Performance monitoring
 - Continuous improvements and support
-

Conclusion

The Municipal Unified Communication Platform (PCUM) represents a major step toward digital transformation and smart governance in municipalities. By centralizing communication and improving citizen engagement, the platform will enhance operational efficiency, transparency, and public trust.
